Laboratory Procedures

GLP-1 (7-15) (human, mouse, rat, porcine, bovine, ovine) (trifluoroacetate salt) is supplied as a solid. A stock solution may be made by dissolving the GLP-1 (7-15) (human, mouse, rat, porcine, bovine, ovine) (trifluoroacetate salt) in DMSO.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of GLP-1 (7-15) (human, mouse, rat, porcine, bovine, ovine) (trifluoroacetate salt) can be prepared by directly dissolving the solid in aqueous buffers. GLP-1 (7-15) (human, mouse, rat, porcine, bovine, ovine) (trifluoroacetate salt) is sparingly soluble (1-10 mg/ml) in PBS (pH 7.2). We do not recommend storing the aqueous solution for more than one day.

Description

Glucagon-like peptide 1 (GLP-1) (7-15) is a peptide fragment of the endogenous incretin hormone GLP-1 (Item No. 24460).¹ GLP-1 (7-15) is formed by cleavage of the peptide bond between Asp¹⁵ and Val¹⁶ in GLP-1 by neprilysin.
