Laboratory Procedures

N,N'-Diferuloylputrescine is supplied as a crystalline solid. A stock solution may be made by dissolving the N,N'-diferuloylputrescine in the solvent of choice, which should be purged with an inert gas. N,N'-Diferuloylputrescine is soluble (≥10 mg/ml) in DMSO and slightly soluble (0.1-1 mg/ml) in ethanol.

Description

N,N'-Diferuloylputrescine is a polyamine that has been found in *Z. mays* and has diverse biological activities.¹⁻³ It scavenges DPPH (Item No. 14805), superoxide, and hydroxyl radicals in cell-free assays (IC_{50} s = 38.5, 291.6, and 351.9 μ M, respectively).¹ N,N'-Diferuloylputrescine inhibits tyrosinase (IC_{50} = 291.3 μ M for the mushroom enzyme) and forskolin-induced pigmentation in B16/F10 melanoma cells when used at a concentration of 50 μ g/ml.^{1,2} It inhibits LPS-induced increases in nitric oxide (NO) and inducible nitric oxide synthase (iNOS) levels, as well as NF- κ B activity, in RAW 264.7 macrophages when used at a concentration of 50 μ M.³
