Recombinant Maltose Binding Protein (MBP)

CLPRO616
CLPRO616-2
CLPRO616-3
Lot:

Introduction: Maltose Binding Protein is a member of the maltose/maltodextrin system of *E.Coli*, which is accountable for the uptake and efficient catabolism of maltodextrins. The maltose/maltodextrin is a complex regulatory and transport system involving many proteins and protein complexes. MBP elevates the yield of its fusion partner in many cases and is often able to promote the solubility of polypeptides to which it is fused.

Description: Recombinant Maltose Binding Protein produced in *E.Coli* is a single, non-glycosylated polypeptide chain containing 387 amino acids and having a molecular mass of 42 kDa.

Source: *Escherichia Coli*.

Presentation: 50 µg (CLPRO616), 200 µg (CLPRO616-2), or 1 mg (CLPRO616-3), sterile filtered colorless solution (1 mg/ml). The Maltose Binding Protein solution contains 20 mM Tris pH 8.

Stability: Maltose Binding Protein although stable 4°C for 4 weeks, should be stored desiccated below -18°C. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Please prevent freeze-thaw cycles.
