Mouse Anti-CD1a, Cortical Thymocytes Monoclonal Antibody

CLSG36545
CLSG36545-05
Lot:

Clone: O10

Isotype: IgG1, Kappa

Format: **1 ml (CLSG36545)** or **0.5 ml (CLSG36545-05)**. This antibody is supplied as culture supernatant containing sodium azide as preservative.

Titer/Working Dilution: This antibody may be diluted to a titer of 1:20-1:55 in an ABC method. The final dilution should be determined by the user based upon staining conditions employed.

Staining Protocol: We suggest an incubation period of 30 minutes at room temperature. Optimal incubation conditions should be determined by the user based upon the fixation conditions and staining system employed. Formalin fixed paraffin embedded tissue sections require high temperature antigen unmasking with 1mM EDTA buffer, pH 8.0 prior to immunostaining.

Specificity: This antibody reacts with a 49 kD protein. At least five CD1 genes are identified (CD1a, b, c, d and e). This antibody reacts with cortical thymocytes, Langerhans cells in epidermis, dendritic cells of dermis, and Langerhans cells of mucosa of tonsil. This antibody may be useful in the characterization of leukemias and lymphomas.

Positive Control: Tonsil

Cellular Localization: Cell membrane and cytoplasm
