## Mouse anti-Human Cytokeratin 8 (L.M. Weight) Monoclonal Antibody

CLSG36671  
CLSG36671-05  
Lot:

**Immunogen:** BALB/C mice were immunized with cytoskeletal extract of human hepatocellular carcinoma cell line, Hep3B.

**Clone:** 35BH11

**Isotype:** IgM, Kappa

**Format:** 1 ml (CLSG36671), or 0.5 ml (CLSG36671-05). This antibody is supplied as tissue culture supernatant containing sodium azide as a preservative.

**Titer/Working Dilution:** This antibody may be diluted to a titer of 1:10-1:25 in an ABC method. The final dilution should be determined by the user based upon the staining conditions employed.

**Staining Protocol:** We suggest an incubation period of 30 minutes at room temperature. Optimal incubation conditions should be determined by the user based upon the fixation conditions and staining system employed. Enzymatic pre-digestion of paraffin embedded tissues is recommended prior to the immunostaining.

**Specificity:** This antibody recognizes keratin polypeptide of 54 kDa. It stains strongly with non-squamous epithelium but does not stain squamous epithelium. It reacts with the sweat glands and ducts in the skin. Adenocarcinomas of the ovary, gastrointestinal tract, ductal carcinoma of breast, pancreas, and bile ducts, stain positive with this antibody.

**Positive Control:** Skin

**Cellular Localization:** Cytoplasmic

**Storage:** Store at 2-8°C. Do not use beyond the expiration date stated on the label.
