Purified Mouse anti-Human Cytokeratin AE1/AE3 Monoclonal Antibody

CLSG36695

CLSG36695-05

Lot: I142

Immunogen: BALB/C mice were immunized with human epidermal keratin.

Clone: AE1 & AE3

Isotype: IgG1, Kappa & IgG1, kappa

Format: 1 ml (**CLSG36695**) or 0.5 ml (**CLSG36695-05**). This antibody is supplied as purified IgG fraction harvested from ascites and contains sodium azide as preservative.

Titer/Working Dilution: This antibody may be diluted to a titer of 1:25-1:50 in an ABC method. However, depending on the staining conditions employed, we suggest that final dilution should be determined by the user.

Staining Protocol: We suggest an incubation period of 30 minutes at room temperature. However, depending upon the fixation conditions and the staining system employed, optimal incubation should be determined by the user. Enzymatic predigestion of paraffin embedded tissues is recommended prior to the immunostaining.

Specificity: This AE1/AE3 antibody cocktail recognizes most of the acidic (Type I) keratins as well as basic (Type II). It recognizes keratin polypeptides of 40, 48, 50, 52, 54, 56.5, 58, 59 and 64 to 67 kDa. In keratinized epidermis, 50 kDa keratin is present in the basal layer, while 56.5 kDa keratin is present in suprabasal layers, whereas 58 kDa keratin is present in the basal and suprabasal layers, while 65 to 67 kDa keratin is present in the cells above the basal layers. This antibody can be used to stain distinct cell layers in an epithelial tissue and various neoplasms of epithelial origin.

Positive Control: Skin
