Purified Mouse anti-Human MART-1/Melan-A Monoclonal Antibody

CLSG36774
CLSG36774-05
Lot:

Immunogen: BALB/C mice were injected with recombinant MART-1 protein.

Clone: A103

Isotype: IgG1

Format: 1 ml (CLSG36774), or 0.5 ml (CLSG36774-05). This antibody is supplied as purified immunoglobulin fraction containing sodium azide as a preservative.

Titer/Working Dilution: This antibody may be diluted to a titer of 1:50-1:100 in an ABC method. The final dilution should be determined by the user based upon the staining conditions employed.

Staining Protocol: We suggest an incubation period of 30 minutes at room temperature. Optimal incubation conditions should be determined by the user based upon the fixation conditions and staining system employed. Formalin fixed paraffin embedded tissue sections require high temperature antigen unmasking with 10 mM citrate buffer, pH 6.0 prior to immunostaining.

Specificity: This antibody is specific to a 20 kDa protein known as MART-1 (Melanoma Antigen Recognized by T cells 1) or Melan-A. This antibody does not cross react with MAGE-1 or tyrosinase protein. MART-1 is a newly identified melanocyte differentiation antigen recognized by autologous cytotoxic T-lymphocytes.

Positive Control: Melanoma

Cellular localization: Cytoplasmic

Storage: Store at 2-8°C. Do not use beyond the expiration date stated on the label.
