## Monoclonal Mouse Antibody to Mast Cell Chymase

CLSG36776  
CLSG36776-05

**Lot:**

**Immunogen:** BALB/C mice were injected with a purified human skin chymase

**Clone:** CC1

**Isotype:** IgG1

**Format:** This antibody is supplied as purified immunoglobulin fraction containing sodium azide as a preservative

**Titre/Working Dilution:** This antibody may be diluted to a titre of 1:25-1:100 in an ABC method. The final dilution should be determined by the end user based upon the staining conditions employed

**Staining protocol:** We suggest an incubation period of 30 minutes at room temperature. Optimal incubation conditions should be determined by the user based upon the fixation conditions and staining system employed. Formalin fixed, paraffin embedded sections require high temperature antigen unmasking with 10mM citrate buffer, pH 6.0 prior to immunostaining

**Specificity:** This antibody reacts with mast cells distributed in skin, synovium, lung and heart. Mast cells contain a number of preformed chemical mediators such as histamine, chymase, carboxypeptidase and proteolytic tryptase. Human mast cell chymase is considered to be an important marker of mast cells and an important mediator of inflammation.

**Positive Control:** Tonsil
