Mouse anti-Human Retinoblastoma Gene Protein (Rb) Monoclonal Antibody

CLSG36845
CLSG36845-05
Lot:

Immunogen: Recombinant human Rb protein.

Clone: 1F8

Isotype: IgG1, kappa

Format: 1 ml (CLSG36845), or 0.5 ml (CLSG36845-05). This antibody is supplied as purified immunoglobulin fraction containing sodium azide as a preservative.

Titer/ Working Dilution: This antibody may be diluted to a titer of 1:25-1:75 in an ABC method. The final dilution should be determined by the user based upon the staining conditions employed.

Staining Protocol: We suggest an incubation period of 30 minutes at room temperature. Optimal incubation should be determined by the user based upon the fixation conditions and staining system employed. Formalin fixed paraffin embedded tissue sections require high temperature antigen unmasking with 1 mM EDTA buffer, pH 8.0 prior to immunostaining.

Specificity: This antibody recognizes human retinoblastoma gene protein. Rb gene, a prototype of tumor suppressor genes, has been associated with development and/or progression of bladder, sarcoma, and small cell lung cancer. Functional Rb gene loss has been reported to occur in bladder cancer and osteosarcoma. A significantly poorer tumor-free survival rate was noted for patients who had a tumor with an altered Rb protein with or without vascular invasion.

Positive Control: Colon carcinoma

Cellular Localization: Nuclear

Storage: Store at 2-8°C. Do not use beyond the expiration date stated on the label.
