Rabbit Anti-Human Lambda Light Chain FITC-Conjugated

CLSG80088
Lot: G859

Immunogen:	Pool of human Lambda light chain isolated from the urine of patients with Bence Jones Proteinuria.
Format:	1 ml purified immunoglobulin fraction of rabbit antiserum conjugated with fluorescein isothiocyanate isomer 1, containing sodium azide as preservative.
Titer/Working Dilution:	This antibody may be diluted to a titer of 1:20-1:40 for immunofluorescence technique. However, depending on the staining conditions employed, we suggest that the final dilution should be determined by the user.
Staining Protocol:	We suggest an incubation period of 30-60 minutes at room temperature. However, depending upon the fixation conditions optimal incubation conditions should be determined by the end user.
Specificity:	Traces of contaminating antibodies have been removed by solid phase absorption. Only the lambda precipitation line appeared in cross immunoelectrophoresis. This antibody is well suited for tissue section staining but may be used for other applications also.
Storage:	Store the antibody at 2-8°C in dark. Do not use it beyond the expiration date stated on the label.

JV 02/14/08

For Research Use Only. Not for Diagnostic or Therapeutic Work.
