Mouse anti-Human Cyclin D1 Monoclonal Antibody

CLSG80295

Lot#:

Immunogen:

BALB/C mice were immunized with human recombinant cyclin D1 protein.

Size:

6 ml

Clone:

DCS-6

Isotype:

IgG2a

Format:

This antibody has been pretitered and quality controlled work on formalin-fixed paraffin-embedded as well as acetone fixed cryostat tissue sections. No further titration is required.

Staining Protocol:

We suggest an incubation period of 30 minutes at room temperature. However, depending upon the fixation conditions and the staining system employed, optimal incubation should be determined by the user.
Formalin fixed paraffin embedded tissue sections require high temperature antigen unmasking with 10 mM citrate buffer, pH 6.0 prior to immunostaining.

Specificity:

The cyclin D1 protein belongs to a family of proteins which function primarily in the cell division cycle by regulating the activity of cyclin dependent kinases (cdks). The chromosomal region in which the cyclin D1 gene is located is amplified in a number of cancers. The human cyclin D1 gene has been mapped to the 11q13 locus and has been shown to be the PRAD1 gene product. This antibody cross reacts with monkey, rat and mouse.

Positive Control:	Breast carcinoma
Cellular Localization:	Nuclear
Storage:	Store the antibody at 4° C. Do not use it beyond the expiration date stated on the label.
