Mouse Anti-Human Granulocyte Associated Antigen, CD15 Monoclonal Antibody

CLSG80345

Lot:

Immunogen:	Purified neutrophils from normal human peripheral blood.
Clone:	MY-1
Isotype:	IgM, Kappa
Format:	This antibody has been pretitrated and quality controlled to work on formalin-fixed paraffin-embedded as well as acetone fixed cryostat tissue sections. No further titration is required.
Staining Protocol:	We suggest an incubation period of 30 minutes at room temperature. However, depending upon the fixation conditions and the staining system employed, optimal incubation should be determined by the user. <u>Suitable for formalin/paraffin tissues.</u>
Specificity:	The specificity of this antibody is similar to antibodies Leu-M1, TÛ 9 and VIM-D5, recognizing an epitope involving the carbohydrate sequence 3-fucosyl-N-acetylacetosamine. This antibody reacts with an antigen located on mature granulocytes and on Hodgkin and Reed-Sternberg cells.
Positive Control:	Tonsil
Cellular Localization:	Cell membrane
Storage:	Store the antibody at 4-8°C. Do not use it beyond the expiration date stated on the label.
