Rabbit Anti-Human Synaptophysin Monoclonal Antibody

CLSG80455

Lot:

Clone: SP11

Immuogen: A synthetic peptide of human Synaptophysin.

Isotype: IgG

Format: 0.5ml. This antibody is supplied as tissue culture supernatant containing sodium azide as preservative.

Titer/Working Dilution: This antibody may be diluted to a titer of 1:100 in an ABC method. However, depending on the staining conditions employed, we suggest that final dilution should be determined by the user.

Staining Protocol: We suggest an incubation period of 30 minutes at room temperature. However, depending upon the fixation conditions and the staining system employed, optimal incubation should be determined by the user. Formalin fixed paraffin embedded tissue sections require high temperature antigen unmasking with 10 mM citrate buffer, pH 6.0 prior to immunostaining.

Specificity: This antibody recognizes a protein of 38kDa, identified as synaptophysin. It labels normal neuroendocrine cells of human adrenal medulla, carotid body, skin, pituitary gland, thyroid, lung, pancreas, gastrointestinal mucosa, Paneth's cells in the gastrointestinal tract and of gastric parietal cells. Neurons in the brain, spinal cord, and retina are also labeled. In combination with anti-chromogranin A and anti-NSE, this antibody to synaptophysin is very useful in the identification of normal neuroendocrine cells and neuroendocrine neoplasms. This antibody crossreacts with Human.

Positive Control: Pancreas

Cellular Localization: Cytoplasmic
