Corning® Rocker Cell Culture Bag

CORNING

Corning® single-use rocker cell culture bags feature a multi-layered film with an inert PE (Polyethylene) fluid contact layer. The bag is designed for use with commercial rocking-motion bioreactor chambers. Corning offers this single-use cell culture bag in 2L to 50L configurations. The bag dimensions, port locations, and stability bars located on each side, allow commercially available bioreactors to accommodate the cell culture bag.

The rocking-motion of the bioreactor platform creates effective, non-invasive mixing of the cell culture/media with efficient gas transfer. Rocking-motion prevents cells from settling at the bottom of the rocker cell culture bag while generating large amounts of recombinant protein in both mammalian and insect cell lines.

Features

- ▶ Provides non-invasive mixing of the cell culture/media with efficient gas transfer
- ▶ Eliminates the risk of cross-contamination
- ▶ Used for basic research to large-scale cell culture applications
- ▶ Available in the following sizes: 2L, 10L, 20L, 22L, and 50L
