PRODUCT INFORMATION

FGFR2 **Target**

FGFR2IIIb; BEK; JWS; BBDS; CEK3; CFD1; ECT1; **Synonyms** KGFR; TK14; TK25; BFR-1; CD332; K-SAM Recombinant human FGFR2 Protein with C-

terminal 10×His tag

Delivery In Stock **Uniprot ID** P21802-3 **Expression Host** HFK293

C-10×His tag Tag

Molecular

Purity

Background

Description

FGFR2(Arg22-Asp375) 10×His tag Characterization

The protein has a predicted molecular mass of **Molecular Weight** 40.6 kDa after removal of the signal peptide.

The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

Lyophilized from sterile PBS, pH 7.4. Normally 5 % Formulation & - 8% trehalose is added as protectants before lyophilization. Please see Certificate of Analysis Reconstitution

for specific instructions.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store

Storage & Shipping at -80°C (Avoid repeated freezing and

thawing). Lyophilized proteins are shipped at

ambient temperature.

The protein encoded by this gene is a member of the fibroblast growth factor receptor family, where amino acid sequence is highly conserved between members and throughout evolution. FGFR family members differ from one another in their ligand affinities and tissue distribution. A full-length representative protein consists of an

extracellular region, composed of three immunoglobulin-like domains, a single hydrophobic membrane-spanning segment and a cytoplasmic tyrosine kinase domain. The

extracellular portion of the protein interacts with fibroblast growth factors, setting in motion a cascade of downstream signals, ultimately influencing mitogenesis and differentiation. This particular family member is a high-affinity receptor for acidic, basic and/or keratinocyte growth factor, depending on the isoform Mutations in this gene are associated with Crouzon syndrome, Pfeiffer syndrome,

Craniosynostosis, Apert syndrome, Jackson-Weiss syndrome, Beare-Stevenson cutis gyrata syndrome, Saethre-Chotzen syndrome, and syndromic craniosynostosis. Multiple alternatively spliced transcript variants encoding different isoforms have been noted for this gene. [provided
