BIOLOGICAL ACTIVITY

Description	Uridine 5'-monophosphate- $^{13}\text{C}_9$, $^{15}\text{N}_2$ (5'-?Uridylic acid- $^{13}\text{C}_9$, $^{15}\text{N}_2$) dilithium is ^{13}C and ^{15}N -labeled Uridine 5'-monophosphate (HY-101981). Uridine 5'-monophosphate (5'-?Uridylic acid), a monophosphate form of UTP, can be acquired either from a de novo pathway or degradation products of nucleotides and nucleic acids in vivo and is a major nucleotide analogue in mammalian milk.
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
