Bay K 8644

Cat. No.:	HY-10588
CAS No.:	71145-03-4
Molecular Formula:	C ₁₆ H ₁₅ F ₃ N ₂ O ₄
Molecular Weight:	356.3
Target:	Calcium Channel
Pathway:	Membrane Transporter/Ion Channel; Neuronal Signaling
Storage:	Powder -20°C 3 years 4°C 2 years In solvent -80°C 6 months -20°C 1 month

SOLVENT & SOLUBILITY

In Vitro	DMSO : 83.33 mg/mL (233.88 mM; Need ultrasonic)					
	Preparing Stock Solutions	Solvent Concentration	Mass	1 mg	5 mg	10 mg
		1 mM		2.8066 mL	14.0331 mL	28.0662 mL
		5 mM		0.5613 mL	2.8066 mL	5.6132 mL
		10 mM		0.2807 mL	1.4033 mL	2.8066 mL
Please refer to the solubility information to select the appropriate solvent.						
In Vivo	1. Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline) Solubility: 2.08 mg/mL (5.84 mM); Suspended solution; Need ultrasonic					
	2. Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline Solubility: ≥ 1.67 mg/mL (4.69 mM); Clear solution					

BIOLOGICAL ACTIVITY

Description	Bay K 8644 ((±)-Bay K 8644) is a racemate consisting of two isomers (R)-(+)-Bay-K-8644 and (S)-(-)-Bay-K-8644 ^[1] . Bay K 8644 is a L-type Ca ²⁺ channel agonist with an EC ₅₀ of 17.3 nM. Bay K 8644 increases Ca ²⁺ influx through sarcolemmal Ca ²⁺ channels by increasing the open time of the channel. Bay K 8644 has vasoconstrictive effects ^{[2][3]} .
IC ₅₀ & Target	L-type calcium channel 17.3 nM (EC50)
In Vitro	In newborn rat ventricular cardiomyocytes, Bay K 8644 (1 μM) treatment increases L-type calcium current density in 2-day-old cells. The higher increase of L-type calcium current density by Bay K 8644 in 2-day- than in 7-day-old cultured cells could be interpreted as the result of a difference in the phosphorylation level of calcium channels for each stage of

development^[4].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

In Vivo

A one time dose as low as 10 µg/kg of Bay K 8644 significantly elevates mean arterial pressure (MAP) in endotoxin-treated hypotensive rats while having minimal effects in normal rats. Bay K 8644 also causes a dose-dependent decrease in heart rate of 37% in endotoxin-treated rats and 39% in control rats^[5].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

CUSTOMER VALIDATION
