BIOLOGICAL ACTIVITY

Description	Ethylhexyl triazone is an approved ultraviolet-B (UV-B) chemical filter for commercial sunscreens.
In Vitro	One property of Ethylhexyl triazone (EHT) is its large molecular weight (823.07 g/mol); such filters are unlikely to penetrate the skin, thereby reducing effects associated with such skin penetration. It displays a broad absorption profile across the UV-B region, with a maximum absorption at ~311 and ~313 nm for Ethylhexyl triazone-dioxane and Ethylhexyl triazone-methanol, respectively^[1]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
