Erlotinib-¹³C₆ hydrochloride

Cat. No.:	HY-12008S1
CAS No.:	1210610-07-3
Molecular Formula:	C ₁₆ ¹³ C ₆ H ₂₄ ClN ₃ O ₄
Molecular Weight:	435.85
Target:	EGFR; Autophagy
Pathway:	JAK/STAT Signaling; Protein Tyrosine Kinase/RTK; Autophagy
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Erlotinib- ¹³ C ₆ (hydrochloride) is the ¹³ C labeled Erlotinib Hydrochloride[1]. Erlotinib Hydrochloride (CP-358774 Hydrochloride) inhibits purified EGFR kinase with an IC ₅₀ of 2 nM[2]. Erlotinib- ¹³ C ₆ (hydrochloride) is a click chemistry reagent, it contains an Alkyne group and can undergo copper-catalyzed azide-alkyne cycloaddition (CuAAC) with molecules containing Azide groups.
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
