Bempedoic acid-d₅

Cat. No.:	HY-12357S
CAS No.:	2408131-71-3
Molecular Formula:	C ₁₉ H ₃₁ D ₅ O ₅
Molecular Weight:	349.52
Target:	ATP Citrate Lyase; AMPK
Pathway:	Metabolic Enzyme/Protease; Epigenetics; PI3K/Akt/mTOR
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Bempedoic acid-d ₅ is the deuterium labeled Bempedoic acid[1]. Bempedoic acid (ETC-1002) is an ATP-citrate lyase (ACL) inhibitor[1]. Bempedoic acid (ETC-1002) activates AMPK[2].
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
