Debutyldronedarone-d₇ hydrochloride

Cat. No.:	HY-12753AS
Molecular Formula:	C ₂₇ H ₃₀ D ₇ ClN ₂ O ₅ S
Molecular Weight:	544.15
Target:	Thyroid Hormone Receptor; Isotope-Labeled Compounds
Pathway:	Vitamin D Related/Nuclear Receptor; Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Debutyldronedarone-d ₇ hydrochloride is deuterated labeled Debutyldronedarone hydrochloride (HY-12753A). Debutyldronedarone (SR35021) hydrochloride, the main metabolite of Dronedarone, is a selective thyroid hormone receptor α ₁ (TRα ₁) inhibitor. Debutyldronedarone hydrochloride inhibits T3 binding to TRα ₁ and TRβ ₁ by 77% and 25%, respectively. Debutyldronedarone hydrochloride can be used for the research of arrhythmic ^[1] .
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
