BIOLOGICAL ACTIVITY

Description	Isoflupredone belongs to the class of corticosteroids and exerts its effect by binding to glucocorticoid and mineralocorticoid receptors of animals, such as horses. Isoflupredone can be used in wide range of conditions, such as infection and inflammatory diseases ^[1] .
In Vivo	Isoflupredone shows a significant decrease in serum potassium level in horses. Isoflupredone is a potent drug for the treatment of recurrent airway obstruction affected horses^[1]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
