N-Desmethyl dosimertinib-d₅

Cat. No.:	HY-142283BS
CAS No.:	2719691-00-4
Molecular Formula:	C ₂₇ H ₂₆ D ₅ N ₇ O ₂
Molecular Weight:	490.61
Target:	EGFR
Pathway:	JAK/STAT Signaling; Protein Tyrosine Kinase/RTK
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	N-Desmethyl dosimertinib-d ₅ is the deuterium labeled Dosimertinib (HY-142283). Dosimertinib is a highly potent, selective, and orally active deuterated EGFR inhibitor. Dosimertinib can be used for the research of non-small-cell lung cancer[1][2].
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
