BIOLOGICAL ACTIVITY

Description

Boc-Inp-OH is a biochemical reagent that can be used as a biological material or organic compound for life science related research.

In Vitro

It is a pharmaceutical intermediate. The camptothecin ester of isonipecotic acid is installed on a triazine dendrimer intermediate obtained through an iterative, scalable route to ultimately yield cationic and PEGylated targets with activities in cell culture comparable to free drug.
 MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Caution: Product has not been fully validated for medical applications. For research use only.
