Threo-Chloramphenicol-d₆

Cat. No.:	HY-B0239S2
Molecular Formula:	C ₁₁ H ₆ D ₆ Cl ₂ N ₂ O ₅
Molecular Weight:	329.17
Target:	JNK; Apoptosis; VEGFR; MMP; Bacterial; Akt; Autophagy; HIF/HIF Prolyl-Hydroxylase; Antibiotic; Beclin1
Pathway:	MAPK/ERK Pathway; Apoptosis; Protein Tyrosine Kinase/RTK; Metabolic Enzyme/Protease; Anti-infection; PI3K/Akt/mTOR; Autophagy
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Threo-Chloramphenicol-d ₆ is the deuterium labeled Chloramphenicol[1]. Chloramphenicol is an orally active, potent and broad-spectrum antibiotic. Chloramphenicol shows antibacterial activity. Chloramphenicol represses the oxygen-labile transcription factor and hypoxia inducible factor-1 alpha (HIF-1α) in hypoxic A549 and H1299 cells. Chloramphenicol suppresses the mRNA levels of vascular endothelial growth factor (VEGF) and glucose transporter 1, eventually decreasing VEGF release. Chloramphenicol can be used for anaerobic infections and lung cancer research[2][3][4].
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
