Hydrochlorothiazid-¹³C,₂

Cat. No.:	HY-B0252S1
CAS No.:	1190006-03-1
Molecular Formula:	C ₆ ¹³ CH ₆ D ₂ ClN ₃ O ₄ S ₂
Molecular Weight:	300.74
Target:	TGF-beta/Smad; Potassium Channel; Isotope-Labeled Compounds
Pathway:	Stem Cell/Wnt; TGF-beta/Smad; Membrane Transporter/Ion Channel; Others
Storage:	Powder -20°C 3 years In solvent -80°C 6 months -20°C 1 month

BIOLOGICAL ACTIVITY

Description	Hydrochlorothiazid- ¹³ C, ₂ is the ¹³ C- and deuterium labeled Hydrochlorothiazide. Hydrochlorothiazide (HCTZ), an orally active diuretic agent of the thiazide class, inhibits transforming TGF-β/Smad signaling pathway. Hydrochlorothiazide has direct vascular relaxant effects via opening of the calcium-activated potassium (KCA) channel. Hydrochlorothiazide improves cardiac function, reduces fibrosis and has antihypertensive effect[1][2][3].
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs^[71]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
