Dimethomorph-d₈

Cat. No.:	HY-B0846S
CAS No.:	1346606-71-0
Molecular Formula:	C ₂₁ H ₁₄ D ₈ ClNO ₄
Molecular Weight:	395.91
Target:	Fungal; Androgen Receptor; Parasite
Pathway:	Anti-infection; Vitamin D Related/Nuclear Receptor
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Dimethomorph-d ₈ is the deuterium labeled Dimethomorph[1]. Dimethomorph is a fungicide belongs to the fungicide group of sterol biosynthesis inhibitor. Dimethomorph can inhibit fungal cell wall formation. Dimethomorph also inhibits androgen receptor (AR) activity in MDA-kb2 cells with an IC ₂₀ of 0.263 μM[2][3][4].
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
