Secnidazole-d₄

Cat. No.:	HY-B1118S2
Molecular Formula:	C ₇ H ₇ D ₄ N ₃ O ₃
Molecular Weight:	189.21
Target:	Bacterial; Parasite; Antibiotic
Pathway:	Anti-infection
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Secnidazole-d ₄ is the deuterium labeled Secnidazole[1]. Secnidazole (RP-14539) is an orally active azole antibiotic and a imidazole mitigator of <i>Serratia marcescens</i> virulence. Secnidazole, as an analog of acylhomoserine lactones, effectively inhibits QS resulting in the attenuation of <i>Pseudomonas aeruginosa</i> pathogenesis. Secnidazole has antimicrobial activity against many anaerobic Gram-negative and Gram-positive bacterial species in vitro. Secnidazole can be used for the research of various diseases, such as amoebiasis and giardiasis, and bacterial vaginitis[1][2][3].
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
