BIOLOGICAL ACTIVITY

Description	Valepotriate can be isolated from Valeriana jatamansi Jones, has anti-epileptic and anti-cancer activities ^{[1][2]} .
In Vivo	Valepotriate showed significant anti-epileptic activity against MES- and PTZ-induced epilepsy at doses of 5, 10, and 20 mg/kg, and ED50 values for MES- and PTZ-induced epilepsy were 7.84 and 7.19 mg/kg, respectively. Furthermore, valepotriate (10 and 20 mg/kg) can significantly prolong sleeping time and shorten the latency time on the pentobarbital sodium-induced sleeping time test. Furthermore, valepotriate (5, 10, and 20 mg/kg) could significantly up-regulate the expression of GABAA, GAD65, and Bcl-2 and down-regulate the expression of caspase-3, but had no significant effect on the expression of GABAB^[2]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
