BIOLOGICAL ACTIVITY

Description

Bivalirudin, a peptide anticoagulant, is a direct thrombin inhibitor for anticoagulation in the setting of invasive cardiology, particularly percutaneous coronary intervention^{[1][2]}.

In Vivo

Bivalirudin (2 mg/kg) delays both the time for appearance of first thrombus and the time for occlusion in P2Y12^{+/+} arteries, although neither prevented vessel occlusion^[2].
MCE has not independently confirmed the accuracy of these methods. They are for reference only.
