Conalbumin

Cat. No.:	HY-P2232		
CAS No.:	1391-06-6		
Target:	Fungal		
Pathway:	Anti-infection		
Storage:	Powder	-20°C	3 years
	In solvent	-80°C	6 months
		-20°C	1 month

Conalbumin

BIOLOGICAL ACTIVITY

Description

Conalbumin (Ovotransferrin), also known as ovotransferrin, is a monomeric glycoprotein consisting of 686 amino acids, encoded by the avian transferrin gene in the oviduct, and a prominent component of chicken egg white. Exhibiting a unique glycosylation pattern that differentiates it from serum transferrin, Conalbumin is a potent iron binder that plays a crucial role in iron transport to developing embryos. Additionally, it possesses a range of biological activities, including antimicrobial, antifungal, antiviral, anticancer, antioxidative, antihypertensive, and immunoregulatory properties, making it valuable in numerous applications such as infant formula ingredients, food additives, and agents for enhancing animal health.

Caution: Product has not been fully validated for medical applications. For research use only.
