| Reactivity: | Mouse |
| Host Species: | Goat |

Product Details

| | |
|----------------------|---|
| Background: | Anti-Mouse IgM DyLight antibody specifically detects mouse IgM. Immunoglobulin M is the largest antibody isotype and the first to be secreted against an initial exposure to antigen. IgM is predominantly produced in the spleen. Formed from covalently linking 5 immunoglobulins together, the approximate molecular weight of IgM is 900kDa and possesses 10 binding sites (though due to the size of most antigens, not all sites are capable of binding at once). Due to this large size, IgM is typically isolated to the serum. Anti-Mouse IgM antibody is ideal for investigators in Immunology, Microbiology, and Cell Biology. |
| Synonyms: | Goat Anti-Mouse IgM (mu chain) Antibody DyLight 800™ Conjugated, Goat Anti Mouse IgM mu chain DyLight 800™ Conjugated Antibody |
| Host Species: | Goat |
| Specificity: | IgM µ chain |
| Conjugate: | DyLight™ 800 |
| Clonality: | Polyclonal |
| Format: | IgG |
| F/P Ratio: | 2.0 |

Target Details

| Reactivity: | Mouse |
| Immunogen: | Mouse IgM whole molecule |

Purity/Specificity: This product was prepared from monospecific antiserum by immunoaffinity chromatography using Mouse IgM coupled to agarose beads followed by solid phase adsorption(s) to remove any unwanted reactivities. Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-Goat Serum, Mouse IgM and Mouse Serum. No reaction was observed against other mouse heavy or light chain proteins.

Application Details

Application Note: The emission spectra for this DyLight™ conjugate match the principle output wavelengths of most common fluorescence instrumentation. This product is designed for immunofluorescence microscopy, fluorescence based plate assays (FLISA) and fluorescent western blotting. This product is also suitable for multiplex analysis, including multicolor imaging, utilizing various commercial platforms.

Assay Dilutions: All assays should be optimized by the user. Recommended dilutions (if any) may be listed below.

FLISA: >1:20,000

IF: >1:5,000

WB: >1:10,000

Western Blot

DyLight™ dyes can be used for two-color Western Blot detection with low background and high signal. Anti-tubulin was detected using a DyLight™ 680 conjugate. Anti-TNFα was detected using a DyLight™ 800 conjugate. The image was captured using the Odyssey® Infrared Imaging System developed by LI-COR.
