# Datasheet for 610-152-041 Mouse IgG2a Antibody ATTO 488 Conjugated Pre-adsorbed

#### **Overview**

Description:	Goat Anti-Mouse IgG2a (Gamma 2a chain) Antibody ATTO 488 Conjugated (Min X Bv, Hu, and Rb Serum Proteins) - 610-152-041
Item No.:	610-152-041
Size:	500 µg
Applications:	Dot Blot, IF, IHC
Reactivity:	Mouse
Host Species:	Goat

## **Product Details**

Background:	Anti-Mouse IgG2a ATTO 488 Antibody generated in goat detects reactivity to Mouse IgG2a (Gamma 2a chain). Secreted as part of the adaptive immune response by plasma B cells, immunoglobulin G constitutes 75% of serum immunoglobulins. IgG2, the second largest of IgG isotypes, comprises almost 25% of IgG and has a low affinity for binding to the Fc receptor of phagocytic cells. Secondary Antibodies are available in a variety of formats and conjugate types. When choosing a secondary antibody product, consideration must be given to species and immunoglobulin specificity, conjugate type, fragment and chain specificity, level of cross-reactivity, and host-species source and fragment composition.
Synonyms:	Goat anti-mouse IgG2a antibody ATTO488 conjugation, goat anti-mouse IgG2a (gamma 2a) ATTO 488 conjugated antibody
Host Species:	Goat
Specificity:	lgG2a
Conjugate:	ATTO 488
Clonality:	Polyclonal
Format:	lgG
F/P Ratio:	4.0

## **Target Details**

**Reactivity:** 

Mouse

www.rockland.com tech@rockland.com +1 484.791.3823

Immunogen Type:	Native Protein
Immunogen:	Mouse IgG2a heavy chain
Purity/Specificity:	MOUSE IgG2a Antibody was prepared from monospecific antiserum by immunoaffinity chromatography using antigens coupled to agarose beads followed by solid phase adsorption(s) to remove any unwanted reactivities. Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-Goat Serum, Mouse Serum and Mouse IgG2a. Specificity was confirmed by ELISA at less than 1% cross-reactivity against other mouse heavy or light chain isotypes. No reaction was observed against Bovine, Human, and Rabbit Serum Proteins. Specificity was confirmed by ELISA at less than 1% of target signal.

## **Application Details**

<b>Tested Applications:</b>	Dot Blot
Suggested Applications:	IF, IHC (Based on references)
Application Note:	Anti-Mouse IgG2a ATTO 488 Antibody has been tested by dot blot. Mouse IgG2a secondary antibody is available in a variety of formats. ATTO 488 Conjugated antibodies are designed for STED microscopy, FRET, immunofluorescence microscopy, fluorescence based plate assays (FLISA) and fluorescent western blotting. This product is also suitable for multiplex analysis, including multicolor imaging, utilizing various commercial platforms. Anti-Mouse IgG2a secondary antibody is suitable for ELISA, Immunohistochemistry western blotting as well as other anti IgG2a antibody based assays. The emission spectra for this ATTO conjugate matches the principle output wavelengths of most common fluorescence instrumentation.
Assay Dilutions:	All assays should be optimized by the user. Recommended dilutions (if any) may be listed below.
FC:	1:500 - 1:2,500
FLISA:	>1:20,000
IF:	>1:5,000
WB:	1:4,000 - 1:20,000

## Formulation

Physical State:	Lyophilized
Concentration:	1.0 mg/mL by UV absorbance at 280 nm
Buffer:	0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2
Preservative:	0.01% (w/v) Sodium Azide
Stabilizer:	10 mg/mL Bovine Serum Albumin (BSA) - Immunoglobulin and Protease free

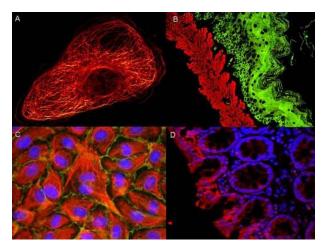

www.rockland.com tech@rockland.com +1 484.791.3823

Reconstitution Volume:	500 μL
<b>Reconstitution Buffer:</b>	Restore with deionized water (or equivalent)

## **Shipping & Handling**

Shipping Condition:	Ambient
Storage Condition:	Store vial at 4° C prior to restoration. For extended storage aliquot contents and freeze at -20° C or below. Avoid cycles of freezing and thawing. Centrifuge product if not completely clear after standing at room temperature. This product is stable for several weeks at 4° C as an undiluted liquid. Dilute only prior to immediate use.
Expiration:	Expiration date is one (1) year from date of receipt.

#### Images

#### Immunofluorescence Microscopy

ATTO <sup>®</sup> dyes can be used for multicolor immunofluorescent detection with low background and high signal. Examples shown are: A. Tubulin in PtK2- male Rat Kangaroo Kidney Epithelial Cells was detected using ATTO 532 labeled secondary antibody. B. Muscle alpha-actin was stained with a mouse primary antibody and ATTO 488 anti-mouse IgG (green) while Cytokeratin was stained with polyclonal rabbit anti-cytokeratin and ATTO 647N anti-rabbit IgG (red). C. HUVEC (Human umbilical vein endothelial cells were stained with anti- Vimentin-ATTO 532 (green), anti-E-Cadherin-ATTO 655 (red) and DAPI (blue). D. Rat colon sections were stained with Anti-Aquaporin 3-ATTO 594 antibody. Hoechst 33342 (blue) is used as counterstain. Images provided courtesy of Dr. Jörg Reichwein, ATTO-TEC GmbH
