# $\gamma$ 2 Tubulin (m2): 293T Lysate: sc-124859

## BACKGROUND

Tubulin exists as five distinct forms, designated  $\alpha$ ,  $\beta$ ,  $\gamma$ ,  $\delta$  and  $\epsilon$ , all of which function as critical components of the cytoskeleton, specifically forming heterodimers which multimerize to produce microtubule filaments.  $\gamma$ 2 Tubulin, also known as TUBG2, is a 451 amino acid member of the Tubulin family and, like other Tubulin proteins, plays a role in the minus end nucleation of microtubule assembly. The gene encoding  $\gamma$ 2 Tubulin maps to human chromosome 17q21.2, which comprises over 2.5% of the human genome and encodes over 1,200 genes. Two key tumor suppressor genes are associated with chromosome 17, namely, p53 and BRCA1. Tumor suppressor p53 is necessary for maintenance of cellular genetic integrity by moderating cell fate through DNA repair versus cell death. Malfunction or loss of p53 expression is associated with malignant cell growth and Li-Fraumeni syndrome. Like p53, BRCA1 is directly involved in DNA repair, though specifically it is recognized as a genetic determinant of early onset breast cancer and predisposition to cancers of the ovary, colon, prostate gland and fallopian tubes.

## CHROMOSOMAL LOCATION

Genetic locus: *Tubg2* (mouse) mapping to 11 D.

## PRODUCT

$\gamma$ 2 Tubulin (m2): 293T Lysate represents a lysate of mouse  $\gamma$ 2 Tubulin transfected 293T cells and is provided as 100  $\mu$ g protein in 200  $\mu$ l SDS-PAGE buffer.

## STORAGE

Store at -20° C. Repeated freezing and thawing should be minimized. Sample vial should be boiled once prior to use. Non-hazardous. No MSDS required.

## APPLICATIONS

$\gamma$ 2 Tubulin (m2): 293T Lysate is suitable as a Western Blotting positive control for mouse reactive  $\gamma$ 2 Tubulin antibodies. Recommended use: 10-20  $\mu$ l per lane.

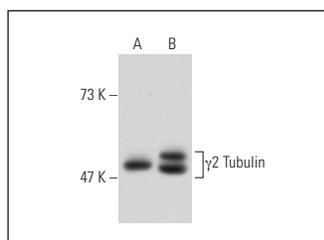

Control 293T Lysate: sc-117752 is available as a Western Blotting negative control lysate derived from non-transfected 293T cells.

$\gamma$  Tubulin (C-11): sc-17787 is recommended as a positive control antibody for Western Blot analysis of enhanced mouse  $\gamma$ 2 Tubulin expression in  $\gamma$ 2 Tubulin transfected 293T cells (starting dilution 1:100, dilution range 1:100-1:1,000).

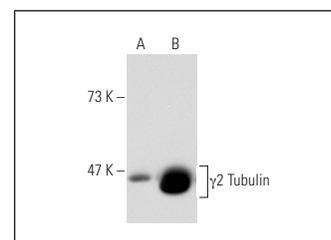

## RECOMMENDED SUPPORT REAGENTS

To ensure optimal results, the following support reagents are recommended:  
1) Western Blotting: use m-IgG $\kappa$  BP-HRP: sc-516102 or m-IgG $\kappa$  BP-HRP (Cruz Marker): sc-516102-CM (dilution range: 1:1000-1:10000), Cruz Marker™ Molecular Weight Standards: sc-2035, UltraCruz® Blocking Reagent: sc-516214 and Western Blotting Luminol Reagent: sc-2048.

## DATA

$\gamma$  Tubulin (C-11): sc-17787. Western blot analysis of  $\gamma$ 2 Tubulin expression in non-transfected: sc-117752 (A) and human  $\gamma$ 2 Tubulin transfected: sc-112064 (B) 293T whole cell lysates.

$\gamma$  Tubulin (TU-30): sc-51715. Western blot analysis of  $\gamma$ 2 Tubulin expression in non-transfected: sc-117752 (A) and mouse  $\gamma$ 2 Tubulin transfected: sc-124859 (B) 293T whole cell lysates.

## RESEARCH USE

For research use only, not for use in diagnostic procedures.

## PROTOCOLS

See our web site at [www.scbt.com](http://www.scbt.com) for detailed protocols and support products.
