# IFN- $\alpha/\beta$ R $\beta$ (h2): 293T Lysate: sc-159501

## BACKGROUND

The type I interferons, IFN- $\alpha$  and IFN- $\beta$ , are a group of structurally and functionally related proteins that are induced by either viruses or double-stranded RNA and are defined by their ability to confer an antiviral state in cells. IFN- $\alpha$  and IFN- $\beta$  appear to compete with one another for binding to a common cell surface receptor, while immune IFN (IFN- $\gamma$ ) binds to a distinct receptor. This distinct receptor, IFN- $\alpha$ R, is only weakly responsive to type I interferons, in contrast to IFN- $\alpha/\beta$ R, which binds to and responds effectively to IFN- $\beta$  and to several of the IFN- $\alpha$  subtypes. IFN- $\alpha/\beta$ R is expressed as two alternatively spliced transcripts, designated IFN- $\alpha/\beta$ R $\alpha$  (IFN- $\alpha/\beta$ R1) and IFN- $\alpha/\beta$ R $\beta$  (IFN- $\alpha/\beta$ R2), both of which are involved in signal transduction and ligand binding.

## CHROMOSOMAL LOCATION

Genetic locus: IFNAR2 (human) mapping to 21q22.11.

## PRODUCT

IFN- $\alpha/\beta$ R $\beta$  (h2): 293T Lysate represents a lysate of human IFN- $\alpha/\beta$ R $\beta$  transfected 293T cells and is provided as 100  $\mu$ g protein in 200  $\mu$ l SDS-PAGE buffer.

## STORAGE

Store at -20° C. Repeated freezing and thawing should be minimized. Sample vial should be boiled once prior to use. Non-hazardous. No MSDS required.

## PROTOCOLS

See our web site at [www.scbt.com](http://www.scbt.com) for detailed protocols and support products.

## APPLICATIONS

IFN- $\alpha/\beta$ R $\beta$  (h2): 293T Lysate is suitable as a Western Blotting positive control for human reactive IFN- $\alpha/\beta$ R $\beta$  antibodies. Recommended use: 10-20  $\mu$ l per lane.

Control 293T Lysate: sc-117752 is available as a Western Blotting negative control lysate derived from non-transfected 293T cells.

## RESEARCH USE

For research use only, not for use in diagnostic procedures.
