# $\mu$ -crystallin (h2): 293T Lysate: sc-159522

## BACKGROUND

Crystallins are divided into two classes: taxon-specific, or enzyme, and ubiquitous. The ubiquitous crystallins constitute the major proteins of the vertebrate eye lens, where they maintain the transparency and refractive index of the lens. The taxon-specific crystallins, also designated phylogenetically-restricted crystallins, include  $\lambda$ -,  $\mu$ -, and  $\zeta$ -crystallin, which all share homology to various enzymes.  $\lambda$ -crystallin is best described in rabbit, where it shares homology with L-3-hydroxyacyl-CoA dehydrogenase from pig. The human  $\mu$ -crystallin gene maps to chromosome 16p12.2, and encodes a protein that is expressed in neural tissue, muscle and kidney. Unlike other crystallins,  $\mu$ -crystallin does not perform a structural role in lens tissue, but rather it binds NADPH and thyroid hormone, which indicates that it may have other regulatory or developmental functions.  $\zeta$ -crystallin/quinone reductase is present at low levels in human lens tissue. It has NADPH-dependent quinone reductase activity distinct from other known quinone reductases and may play a role as a pH response element-binding protein.

## CHROMOSOMAL LOCATION

Genetic locus: CRYM (human) mapping to 16p12.2.

## PRODUCT

$\mu$ -crystallin (h2): 293T Lysate represents a lysate of human  $\mu$ -crystallin transfected 293T cells and is provided as 100  $\mu$ g protein in 200  $\mu$ l SDS-PAGE buffer.

## STORAGE

Store at -20° C. Repeated freezing and thawing should be minimized. Sample vial should be boiled once prior to use. Non-hazardous. No MSDS required.

## RESEARCH USE

For research use only, not for use in diagnostic procedures.

## APPLICATIONS

$\mu$ -crystallin (h2): 293T Lysate is suitable as a Western Blotting positive control for human reactive  $\mu$ -crystallin antibodies. Recommended use: 10-20  $\mu$ l per lane.

Control 293T Lysate: sc-117752 is available as a Western Blotting negative control lysate derived from non-transfected 293T cells.

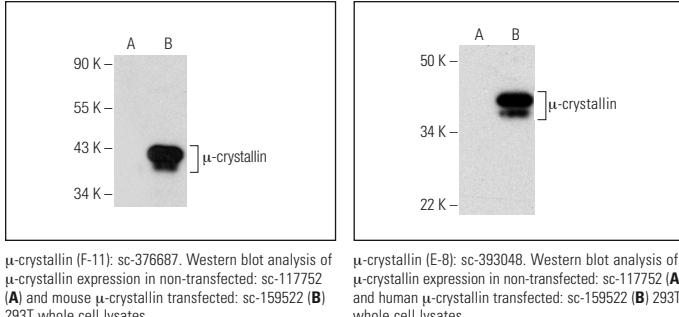

$\mu$ -crystallin (F-11): sc-376687 is recommended as a positive control antibody for Western Blot analysis of enhanced human  $\mu$ -crystallin expression in  $\mu$ -crystallin transfected 293T cells (starting dilution 1:100, dilution range 1:100-1:1,000).

## RECOMMENDED SUPPORT REAGENTS

To ensure optimal results, the following support reagents are recommended:

1) Western Blotting: use m-IgG $\kappa$  BP-HRP: sc-516102 or m-IgG $\kappa$  BP-HRP (Cruz Marker): sc-516102-CM (dilution range: 1:1000-1:10000), Cruz Marker™ Molecular Weight Standards: sc-2035, UltraCruz® Blocking Reagent: sc-516214 and Western Blotting Luminol Reagent: sc-2048.
