# VapA (E-6): sc-390576

## BACKGROUND

*Rhodococcus equi* is a Gram-positive bacterium that causes pyogranulomatous pneumonia in foals and immunocompromised humans. *R. equi* infection is the leading cause of foal death within the first six months of life. VapE (virulence associated protein VapE) is a 206 amino acid protein encoded by *R. equi* virulence plasmid, pREAT701 (p33701). There are seven virulence-associated proteins: VapA, VapC, VapD, VapE, VapF, VapG and VapH. Infected foals typically develop an immune response to *R. equi* infections, with the majority of infected foals expressing antibodies against VapA, with decreasing levels of expression for Vap D, F, G and H, respectively.

## SOURCE

VapA (E-6) is a mouse monoclonal antibody raised against amino acids 29-189 mapping at the C-terminus of virulence associated protein VapA of *Rhodococcus equi* (strain: 103gb-synonym: *Corynebacterium equi*old-name: *Rhodococcus equi*) origin.

## PRODUCT

Each vial contains 200 µg IgG<sub>2a</sub> kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

VapA (E-6) is available conjugated to agarose (sc-390576 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; to HRP (sc-390576 HRP), 200 µg/ml, for WB, IHC(P) and ELISA; to either phycoerythrin (sc-390576 PE), fluorescein (sc-390576 FITC), Alexa Fluor® 488 (sc-390576 AF488), Alexa Fluor® 546 (sc-390576 AF546), Alexa Fluor® 594 (sc-390576 AF594) or Alexa Fluor® 647 (sc-390576 AF647), 200 µg/ml, for WB (RGB), IF, IHC(P) and FCM; and to either Alexa Fluor® 680 (sc-390576 AF680) or Alexa Fluor® 790 (sc-390576 AF790), 200 µg/ml, for Near-Infrared (NIR) WB, IF and FCM.

In addition, VapA (E-6) is available conjugated to biotin (sc-390576 B), 200 µg/ml, for WB, IHC(P) and ELISA.

Alexa Fluor® is a trademark of Molecular Probes, Inc., Oregon, USA

## STORAGE

Store at 4° C, \*\*DO NOT FREEZE\*\*. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

## APPLICATIONS

VapA (E-6) is recommended for detection of virulence associated protein VapA of *R. equi* origin by Western Blotting (starting dilution 1:100, dilution range 1:100-1:1000), immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

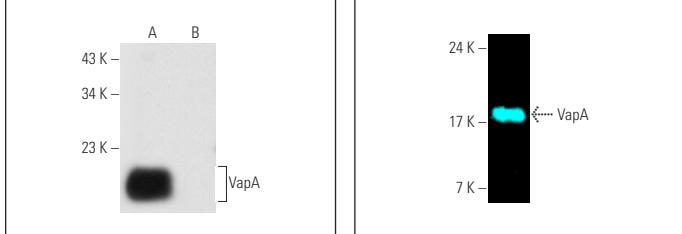

Positive Controls: *Rhodococcus equi* whole cell lysate.

## RECOMMENDED SUPPORT REAGENTS

To ensure optimal results, the following support reagents are recommended:

- 1) Western Blotting: use m-IgG<sub>k</sub> BP-HRP: sc-516102 or m-IgG<sub>k</sub> BP-HRP (Cruz Marker): sc-516102-CM (dilution range: 1:1000-1:10000), Cruz Marker™ Molecular Weight Standards: sc-2035, UltraCruz® Blocking Reagent: sc-516214 and Western Blotting Luminol Reagent: sc-2048.
- 2) Immunoprecipitation: use Protein A/G PLUS-Agarose: sc-2003 (0.5 ml agarose/2.0 ml).
- 3) Immunofluorescence: use m-IgG<sub>k</sub> BP-FITC: sc-516140 or m-IgG<sub>k</sub> BP-PE: sc-516141 (dilution range: 1:50-1:200) with UltraCruz® Mounting Medium: sc-24941 or UltraCruz® Hard-set Mounting Medium: sc-359850.

## DATA

VapA (E-6): sc-390576. Western blot analysis of VapA expression in *Rhodococcus equi* (**A**) and *Escherichia coli* (**B**) whole cell lysates. Note lack of reactivity with *E. coli* in Lane **B**.

VapA (E-6) Alexa Fluor® 647: sc-390576 AF647. Direct fluorescent western blot analysis of VapA expression in *R. equi* whole cell lysate. Blocked with UltraCruz® Blocking Reagent: sc-516214.
