Biological Description

Description	Atg4B-IN-2. A potent, selective Atg4B inhibitor with anticancer activity, inhibits both Atg4B and PLA2, enabling autophagy that counteracts the anticancer activity of anti-desiccation-resistant prostate cancer drugs.
Targets(IC50)	Phospholipase, Autophagy
In vitro	In a dose-dependent manner, Atg4B-IN-2 (compound 21f) (1-10 μ M; 2 hours) restores p62 expression in cells treated with amino acid-free (AF) conditions [1]. At concentrations of 1 and 5 μ M (2 hours), Atg4B-IN-2 moderately decreases autophagic vesicles at 1 μ M and almost completely inhibits autophagy at 5 μ M [1]. At a concentration of 5 μ M (2 hours), Atg4B-IN-2 inhibits Abi-induced autophagy, significantly enhances apoptotic cell death, and increases sensitivity to Abi [1].
