Biological Description

Description	Gelsevirine, a novel STING-specific inhibitor, is an alkaloid from <i>Gelsemium elegans</i> with anxiolytic and antiproliferative activities that inhibits interferon and inflammatory cytokine induction in macrophages exposed to STING agonists, and attenuates STING-related inflammation in sepsis.
Targets(IC50)	STING
In vitro	Gelsevirine inhibits the dimerization and subsequent activation of STING induced by 2'3'-cGAMP; Gelsevirine also induces K48-linked ubiquitination and degradation of STING, which may be achieved through upregulation and recruitment of TRIM21[1].
