Agarose,Low melting point

Chemical Properties

CAS No. : 9012-36-6

Formula:

Molecular Weight:

Appearance: no data available

Storage: Powder: -20°C for 3 years | In solvent: -80°C for 1 year

Biological Description

Description	Agarose (Low melting point) is a type of agarose, a polysaccharide derived from seaweed, commonly used in molecular biology and biochemistry for isolating and purifying DNA and RNA fragments. This low melting point agarose is suitable for recovering large DNA fragments and enzymatic reactions in gels, as well as for applications in pulsed field gel electrophoresis and capillary electrophoresis for genetic material analysis.
In vitro	Agarose, Low melting point, is a biochemical reagent that serves as a biomaterial or organic compound used in life sciences research.

Inhibitor · Natural Compounds · Compound Libraries · Recombinant Proteins

This product is for Research Use Only· Not for Human or Veterinary or Therapeutic Use
