Biological Description

Description	LSTc (LS-tetrasaccharide c), a human lactooligosaccharide found on glycoproteins and glycolipids, serves as a specific recognition motif for the human JC polyomavirus (JCV). This compound holds considerable potential for research into progressive multifocal leukoencephalopathy (PML) [1].
In vitro	LSTc, specifically engaged by JCV, inhibits JCV infection in SVG-A cells. In a Cell Viability Assay using SVG-A cells, a concentration of 5 mM (pretreat LSTc with JCV, then add JCV-LST complexes to cells) over an incubation period of 1 hour resulted in the inhibition of JCV infection. [1]
