Biological Description

Description	Parasin I acetate is a potent 19-residue antimicrobial peptide isolated from the skin mucus of wounded catfish (<i>Parasilurus asotus</i>).
Targets(IC50)	Antibacterial
In vitro	Parasin I with comparable antimicrobial activities localized to the cell membrane and subsequently permeabilized the outer and cytoplasmic membranes. Parasin I and its active analogs show strong cytoplasmic membrane permeabilizing activity[1]. Codon optimized parasin I fused with human lysozyme is expressed in <i>Pichia pastoris</i> , and has potent antibiotic activity[2].
