Biological Description

Description	ELA-14(human) acetate is a fragment of ELA that binds to APJ, activates the Gαi1 and β-arrestin-2 signaling pathways, and induces receptor internalization similarly to its parent endogenous peptide.
Targets(IC50)	Apelin receptor, Arrestin
In vitro	ELA-14 activates the Gαi1 and β-arrestin-2 signaling pathways with EC50s of 8.6 nM and 166 nM. ELA-14 induces receptor internalization and reduces arterial pressure, exerts positive inotropic effects on the heart[1].
In vivo	ELA-14 is rapidly metabolized in rat plasma (t1/2<2 min)[1].
