Biological Description

Description	Pramlintide acetate, a polypeptide analogue of human amylin, functions as an antidiabetic agent and exhibits antineoplastic activity in colorectal cancer.
Targets(IC50)	Others
In vitro	Pramlintide inhibited the growth of HCT-116 and HT-29 in a dose-dependent manner, with higher efficacy against the latter (IC50s; 48.67 and 9.10 µg/mL, respectively; ?p-value =0.013). Moreover, the addition of 5, 10, and 20 µg/mL of pramlintide to HCT-116 and HT-29 with 5-fluorouracil, oxaliplatin, or irinotecan induced the antiproliferative effect synergistically (R>1.6, ?p-value <0.05).
