Biological Description

Description	CaMKI (299-320) is a peptide representing residues 299-320 of Calcium/calmodulin-dependent protein kinase I (CaMKI). This segment, functioning as a protein kinase, exhibits a strong interaction with Ca ²⁺ -CAM ($K_d \leq 1$ nM), enabling it to phosphorylate specific substrate proteins and regulate their activity. It encompasses both the CAM-binding domain and the self-inhibition domain. CaMKI (299-320) is applicable for researching cellular physiological processes such as proliferation, differentiation, and apoptosis.
