Gene Name: BIK

Gene Alias: BIP1, BP4, NBK

Gene BCL2-interacting killer (apoptosis-inducing)

Description:

Omim ID: [603392](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: The protein encoded by this gene is known to interact with cellular and viral survival-promoting proteins, such as BCL2 and the Epstein-Barr virus in order to enhance programmed cell death. Because its activity is suppressed in the presence of survival-promoting proteins, this protein is suggested as a likely target for antiapoptotic proteins. This protein shares a critical BH3 domain with other death-promoting proteins, BAX and BAK. [provided by RefSeq]

Other Designations: BCL2-interacting killer,OTTHUMP00000028974,apoptosis-inducing NBK
