Gene Information

Entrez GeneID: [655](#)

Gene Name: BMP7

Gene Alias: OP-1

Gene Description: bone morphogenetic protein 7

Omim ID: [112267](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: The bone morphogenetic proteins (BMPs) are a family of secreted

signaling molecules that can induce ectopic bone growth. Many BMPs are part of the transforming growth factor-beta (TGFB) superfamily. BMPs were originally identified by an ability of demineralized bone extract to induce endochondral osteogenesis in vivo in an extraskelatal site. Based on its expression early in embryogenesis, the BMP encoded by this gene has a proposed role in early development and possible bone inductive activity. [provided by RefSeq]
