## BRCA1 Pre-design Chimera RNAi

Catalog # : H00000672-R02

規格 : [ 10 nmol ] [ 20 nmol ]

List All

### Specification

**Product Description:** Homo sapiens breast cancer 1, early onset (BRCA1), transcript variant BRCA1b, mRNA.

**Reactivity:** Human

**Supplied Product:** DEPC water

**Target Refseq:** NM\_007295

**Target Region:** Coding sequence

**Storage Instruction:** Store at -20°C, do not exceed 4 - 5 freeze-thaw cycles to ensure product integrity.

**Note:** Position of the Chimera RNAi.  
The related RNAi products listed below were designed from different accession number but sharing the same RNAi sequence.

### Application Image

RNAi Knockdown

### Publication Reference

### Applications

RNAi Knockdown

### Gene Information

Entrez GeneID: [672](#)

**Gene Name:** BRCA1

**Gene Alias:** BRCA1, BRCC1, IRIS, PSCP, RNF53

**Gene Description:** breast cancer 1, early onset

**Omim ID:** [113705](#)

**Gene Ontology:** [Hyperlink](#)

**Gene Summary:** This gene encodes a nuclear phosphoprotein that plays a role in maintaining genomic stability, and it also acts as a tumor suppressor. The encoded protein combines with other tumor suppressors, DNA damage sensors, and signal transducers to form a large multi-subunit protein complex known as the BRCA1-associated genome surveillance complex (BASC). This gene product associates with RNA polymerase II, and through the C-terminal domain, also interacts with histone deacetylase complexes. This protein thus plays a role in transcription, DNA repair of double-stranded breaks, and recombination. Mutations in this gene are responsible for approximately 40% of inherited breast cancers and more than 80% of inherited breast and ovarian cancers. Alternative splicing plays a role in modulating the subcellular localization and physiological function of this gene. Many alternatively spliced transcript variants, some of which are disease-associated mutations, have been described for this gene, but the full-length natures of only some of these variants has been described. A related pseudogene, which is also located on chromosome 17, has been identified. [provided by RefSeq]

**Other Designations:** BRCA1/BRCA2-containing complex, subunit 1, breast and ovarian cancer susceptibility protein 1
