Gene biotinidase

Description:

Omim ID: [253260](#), [609019](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: Biotinidase functions to recycle biotin in the body by cleaving biocytin (biotin-epsilon-lysine), a normal product of carboxylase degradation, resulting in regeneration of free biotin. Biotinidase has also been shown to have biotinyl-transferase activity. Defects in the biotinidase gene cause multiple carboxylase deficiency. [provided by RefSeq]
