### Gene Information

Entrez GeneID: [818](#)

**Gene Name:** CAMK2G

**Gene Alias:** CAMK,CAMK-II,CAMKG,FLJ16043,MGC26678

**Gene Description:** calcium/calmodulin-dependent protein kinase II gamma

**Omim ID:** [602123](#)

**Gene Ontology:** [Hyperlink](#)

**Gene Summary:** The product of this gene belongs to the Serine/Threonine protein kinase family, and to the Ca(2+)/calmodulin-dependent protein kinase subfamily. Calcium signaling is crucial for several aspects of plasticity at glutamatergic synapses. In mammalian cells the enzyme is composed of four different chains: alpha, beta, gamma, and delta. The product of this gene is a gamma chain. Six alternatively spliced variants that encode six different isoforms have been characterized to date. Additional alternative splice variants that encode different isoforms have been described, but their full-length nature has not been determined. [provided by RefSeq]
